# Introduction

This document contains information and instructions on how to migrate Therefore™ On-Premise to Therefore™ Online.

# Limitations and Considerations

Please be aware of the following limitations and considerations for a Therefore™ Online vs. a Therefore™ On-Premise system.

## Limitations:

- In Therefore™ Online, there are prohibited file extensions. It is not possible to save files with these extensions into a Therefore™ Online tenant. If the customer has saved files with these extensions in their Therefore™ On-Premise system before the migration and they chose to let the Therefore Support take care of the migration, then it will not be possible to retrieve / use these files in Therefore™ Online after the migration. Below is a list of the extensions that are currently prohibited. Please note that these extensions are subject to change:

ade;adp;app;asax;ascx;ashx;asmx;asp;aspx;axd;bas;bat;browser;cer;chm;cla;class;cmd;cnt;com;compile;cpl;crt;cs;cshtml;der;dhtml;dll;exe;fxp;gadget;grp;hlp;hpj;hta;htm;html;hxt;inf;ins;isp;its;jar;jhtml;jsp;ksh;lnk;mad;maf;mam;maq;mar;mas;master;mat;mau;mav;maw;mda;mdb;mcf;mde;mdt;mdw;mdz;mhtml;msc;msh;msh1;msh2;mshxml;msh1xml;msh2xml;msi;mso;mst;ocx;ops;osd;pcd;phtml;pif;pl;plg;prf;prg;ps1;ps2;ps1xml;ps2xml;psc1;psc2;tmp;url;vb;vbe;vbs;vsmacros;vsw;ws;wsc;wsf;wsh;xbap;xnk

## Considerations:

- What should happen to existing users? Are they working with internal Therefore users? In this case nothing will change. Are they using AD users? In this case, we have to think about how to transfer these users to Therefore™ internal users. Alternatively, do they plan to use single sign-on (AD FS) with their existing AD users? Or maybe Azure AD or another single sign-on provider? Please discuss migrating users with the Therefore Support before the migration since every solution will be different.
- Are there any views to external databases (local or via linked servers)? These will not work in Therefore™ Online since we do not allow views to the outside from Therefore™ Online. This means that these views will need to be changed to use table replication instead. To learn more about table replication, please refer to the [documentation](#) or the [e-Learning course](#).
- Are there custom DLLs or any other server-side programming (such as workflow DLLs, services, etc.) that are currently in use? This also cannot be transferred to Therefore™ Online since we do not allow it.
- Is there a need for direct access to the SQL database, the Reporting server, or any other server component? This is also not possible with Therefore™ Online.
- Do business operations work on a 24/7 basis? The migration cannot be done without a downtime, this has to be taken into consideration and planned properly.
- How much space will be needed to host your system?

# Migrating Therefore™ On-Premise to Therefore™ Online

Currently, there are two ways to migrate from a Therefore™ On-Premise installation to Therefore™ Online: The migration can be done by [Canon/ the customer](#) or the migration can be done by [Therefore](#).

## 1. Migration by Canon / the Customer

If you choose this option, the entire migration is done by Canon / the customer. No work is done by the Therefore™ Support. No RIAS units will be charged by Therefore.

- Canon requests a tenant to be created for the customer. This is the usual process for ordering a Therefore™ Online tenant.
- The Therefore Customer Service Team creates the tenant and sends out the login details.
- Canon / the customer exports the configuration from the Therefore™ Solution Designer, then imports it into the newly created tenant.
- Canon / the customer uses the Therefore™ Export Utility tool to export customer documents.
- Canon / the customer uses the Therefore™ Document Loader to load their documents into the tenant.

Limitations: It is not possible to export Cases, and only the latest version of a document can be exported via the Therefore™ Export Utility.

## 2. Migration by Therefore

If you choose this option, the migration is done by Therefore. Therefore charges RIAS units for this option. The price depends on the amount of work (more info [below](#)).

There is no need to export/ import documents from Canon's/ the customer's side. Everything is handled by Therefore. Below are the steps involved:

- Canon requests a tenant to be created for the customer. This is the usual process for ordering a Therefore™ Online tenant.
- The Therefore Customer Service Team creates the tenant and sends out the login details.
- Canon/ the customer must make sure that the system is ready for migration:
  - The latest Therefore™ On-Premise version must be used. If this is not the case, the system must be upgraded.
  - An internal Therefore™ User must be created in the system. Alternatively, an existing one can be used. The user has to have FULL administrator access to everything. This user will be used to log on after the migration, Please note that the original login details from tenant creation won't work anymore.
  - The migration/retention queue must be empty.
  - The database must not contain any linked servers or views to external databases.
  - The database must not contain any triggers.
  - The setting Scripting Safe Mode must be set to True. To do so, open the Therefore™ Solution Designer, right-click on the Therefore™ Object and select Settings.... The setting can be found in the Advanced tab under Security.
  - API DLLs must NOT be used in workflows. They need to be removed before the migration can happen.
  - A [verification](#) on all volumes of all documents must be done before the migration. In the Therefore™ Console, go to the Verify menu and click Documents.... If the verification returns any faulty documents, these need to be fixed before the migration can happen.
- Canon/ the customer creates a full backup of the database in BACPAC format (see info [below](#)).
- Canon/ the customer is given access to an Azure file share via a Shared Access Signature which can be time limited and IP limited if needed. There, they can upload the database, documents, full-text, etc. More info can be found under [AZCopy / Azure Storage Explorer Information](#) below.
- After everything is uploaded, Therefore imports the system into the tenant. Note: the existing tenant is completely wiped during the migration, so NO existing configuration that was done on the tenant is kept. Instead, we will import their Therefore™ On-Premise database and documents to the tenant.
- Once the migration is complete, an e-mail is sent out to Canon/the customer with the results and details.

Considerations for this type of migration:

- There is a time gap between Canon / the customer saving and uploading the database backup and the documents and us importing everything into the tenant and making changes to the system.

This means that if the customer saves documents or changes in their Therefore™ On-Premise system while we working on the import these changes will be lost. For that reason, it is best is to plan for a downtime so no data/documents need to be re-created in the tenant.

- The work on Therefore's side usually takes about 3-6 hours depending on the configuration and the number of things we need to change. There will be a charge of at least 1 RIAS day for this. If the work on Therefore's side takes longer there may be an additional charge.

- The database backup must be in BACPAC format. Microsoft has some limitations regarding the information that can be contained inside this file type: Domain accounts can't be used - instead, they need to be deleted before creating the BACPAC file. Furthermore, external views and linked servers can not be exported into a BACPAC file.
- The following guide explains how to export files to a BACPAC format:

<https://www.mssqltips.com/sqlservertip/5255/learn-how-to-migrate-a-sql-server-database-to-sql-azure-server/>

# AZCopy / Azure Storage Explorer Information

Therefore sends you a URL to use for uploading your data to Azure Storage. This is always specific to the request, never a general one.

To upload the data using the URL you will either need to use the graphical Azure Storage Explorer tool (<https://azure.microsoft.com/en-us/features/storage-explorer/>) or the AzCopy tool, AzCopy.exe (<https://docs.microsoft.com/en-us/azure/storage/common/storage-use-azcopy-v10>) to upload the data. We suggest using the AzCopy.exe because it's easier and better than dealing with the graphical interface.

This is an example of a test URL which can be used with the graphical Azure Storage Explorer:

```
https://tenantname1.file.core.windows.net/?sv=2020-08-04&ss=f&srt=sco&sp=rwdlc&se=2022-03-31T17:43:57Z&st=2022-02-25T10:43:57Z&spr=https&sig=8G5U7SS8w0EliaZAugKRwAYpdiZWUTpXnyEAo2ze%2BjA%3D
```

Please use the following sample command with the AzCopy tool (note: you need either an Administrator command prompt or an administrator powershell window):

```
azcopy copy "C:\temp\test1" "https://tenantname1.file.core.windows.net/upload?sv=2020-08-04&ss=f&srt=sco&sp=rwdlc&se=2022-03-31T17:43:57Z&st=2022-02-25T10:43:57Z&spr=https&sig=8G5U7SS8w0EliaZAugKRwAYpdiZWUTpXnyEAo2ze%2BjA%3D" --recursive=true --overwrite=ifSourceNewer
```

Please make sure you are using the URL pattern that is intended for the tool you are using. The URLs are not interchangeable.

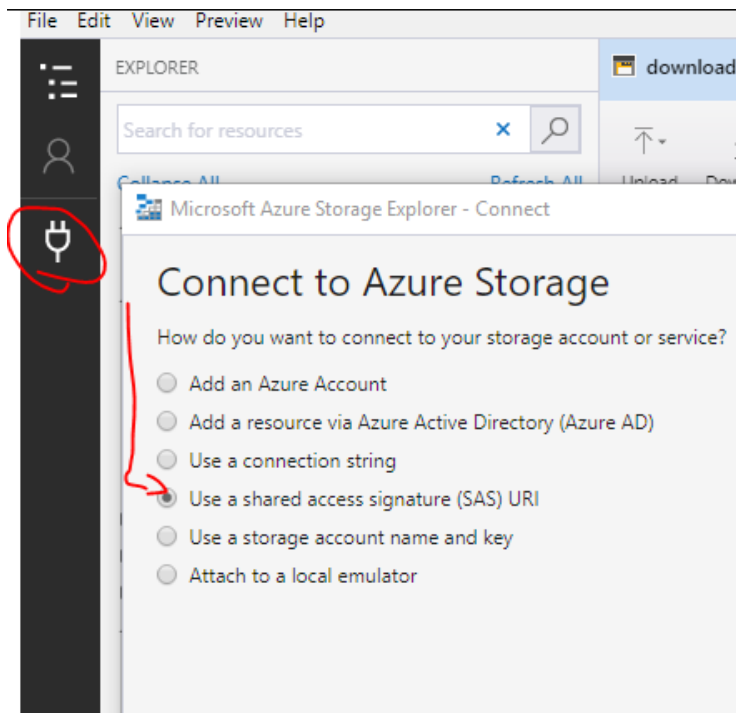

The result should look similar to the following screenshot:

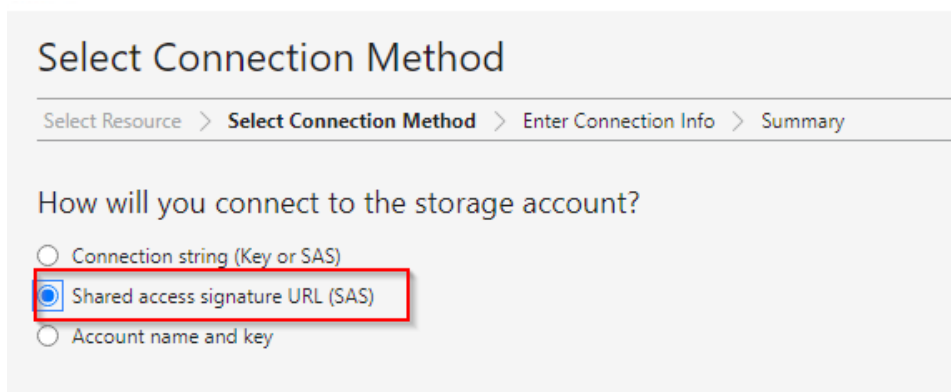

```
PS C:\WINDOWS\system32> azcopy copy "C:\temp\tfcustomertest" "https://tftestcustomer.file.core.windows.net/uploadtest?sv=2019-10-10&ss=bfqt&srt=sco&sp=rwdlacupx&se=2020-05-30T23:04:35Z&st=2020-05-27T15:04:35Z&spr=https&sig=DBCpndG2nXlghseMIpAh69%2FzSnH%2FB3L2N5CRtTEFX4%3D" --recursive=true --overwrite=ifSourceNewer
INFO: Scanning...
Job 0fe44a76-edf3-e641-5329-22f0a622ea75 has started
Log file is located at: C:\Users\attila.kovacs.AD0S\azcopy\0fe44a76-edf3-e641-5329-22f0a622ea75.log
INFO: azcopy.exe: A newer version 10.4.3 is available to download
0.0 %, 0 Done, 0 Failed, 2 Pending, 0 Skipped, 2 Total,
Job 0fe44a76-edf3-e641-5329-22f0a622ea75 summary
Elapsed Time (Minutes): 0.0333
Total Number Of Transfers: 2
Number of Transfers Completed: 0
Number of Transfers Failed: 0
Number of Transfers Skipped: 2
TotalBytesTransferred: 0
Final Job Status: CompletedWithSkipped
PS C:\WINDOWS\system32>
```

You can run this command multiple times. In that case, it only syncs new files so this can be used as a pre-copy before the actual upload.

If you want to use the graphical interface, install Azure Storage Explorer and use the Add account button.

Select the SAS option:

Paste the URL from above to the URI part and it will connect to the file storage:

## Enter Connection Info

Select Resource > Select Connection Method > **Enter Connection Info** > Summary

Display name:

[REDACTED]

Service URL:

https://[REDACTED]/?sv=2020-08-04&ss=f&srt=sco&sp=rwdlc&st=2022-01-03T13:00:00Z&sig=vTaACDFY[REDACTED]2M6HvW[REDACTED]

The data that needs to be uploaded is the following:

1. The complete content of the Buffer folder.
2. If storage devices are used: The complete content of the Primary Storage folder.
3. The complete content of the Full-text folder
4. The full backup of the database in BACPAC format. For more info on how to create a BACPAC backup check this article: <https://www.mssqltips.com/sqlservertip/5255/learn-how-to-migrate-a-sql-server-database-to-sql-azure-server/>)
5. If the Therefore™ Content Connector is being used: The complete content of the Content Connector Input folders.

Please note that after creating the database backup and uploading it, any changes to the Therefore™ On-Premise system will NOT be synchronized to the Therefore™ Online tenant.

Once everything is uploaded, Therefore can do the actual migration. We should agree on a date for the actual migration at least a few days in advance.
